iPhone Photography - Camera & Features - iOS 18

Take a Photo

Open Camera by any method

For auto operation, let camera auto set focus and exposure. Just point and shoot.

Take the photo with a light, quick tap on the shutter button.

View Photo

After photo is taken, tap here to view. Last photo taken is always available here.

View Photo

Other Options

Tell Siri to:

“Open camera”

“Take a photo”

“Take a selfie”

- Use either volume button to operate the shutter button for a photo.
- Hold down the volume button for video
